The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/672,458

Applicant(s)

TOKKONEN, TIMO

Examiner

Andrea N. Long

Art Unit

2176

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 October 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3,6,7,10-12 and 15-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3,6,7,10-12 and 15-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(c), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(c) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/30/2008 has been entered.

Applicant's Response

In Applicant's Responses dated 10/30/2008, Applicant amended claims 1, 6, and 11, and argued against all objections and rejections previously set forth in the Office Action dated 05/27/2008.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 6, and 11 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Independent claims 1, 6, and 11 contain the limitation "automatically determining from the identity of the separate information unit **without a control input** whether input entry is in a first mode or a second mode". There is no mention in the original Specification of determining without a control input the mode of the entry.

If the Examiner has overlooked the portion of the original Specification that describes this feature of the present invention, the Applicant should point it out (by page and line number) in the response to the Office Action.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 6-7, 10-12, and 15-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Venolia et al. (US Patent 6573844 B1), hereinafter "Venolia" in view of Comerford et al. (US Patent 5963671), hereinafter "Comerford" in further view of Shimada et al. (US Patent 7136047 B2), hereinafter "Shimada".

For the convenience of the Applicant, the Examiner has pointed out particular references contained in the prior art(s) of record in the body of this action. Although the specified citations are representations of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. The Applicant should consider the entire reference(s) as applicable as to the limitations of the claims.

As to independent claim 1, Venolia teaches a method comprising:

receiving a separate information unit entered with input elements of a dynamic I/O arrangement belonging to a user interface of an electronic device (column 5 lines 54-56, column 5 line 63 through column 6 line 9)

identifying after each input the entered information unit and determining based on probability which information units will likely be input next (column 6 lines 44-45); and,

emphasizing by size the input elements corresponding to the information units likely to be entered next in the user interface of the electronic device, wherein the size of the emphasized input elements are determined on a case-specific basis depending on the probability of the information unit associated with the input element being entered next (column 6 lines 44-59, Fig. 4, column 7 lines 15-23). As noted by Applicant on page 9 of Applicant's Response dated 09/20/2007, Venolia provides indication of relative probability of an order of information units likely to be entered next. However Venolia uses arrangement of units instead of varying the size of the units to portray the respective probability and does not explicitly teach determining modes.

Comerford, which is in the same field of endeavor of quicker user selection of input units, also uses an enhancement method to visually depict next likely units. Comerford provides reasonable suggestion to one skilled in the art that the keys that are most likely to be selected next can vary in size dependent upon the order of probability (column 3 lines 64-67 "degree of emphasis", column 13 lines 1-9).

Shimada which facilitates quicker selection of input units teaches automatically determining from the identity of the separate information unit without a control input whether input is in a first mode or a second mode (column 2 lines 56-60 – taught as a user selecting an

appropriate mode for which the user wants the input units to be displayed, those modes can consist of numbers and the English alphabet),

wherein when it is determined that the input entry is in a first mode, increasing in an equal amount size of members of a group of input elements (column 2 lines 56-64, Figures 4C and 4D). Therefore Shimada provides for a user to select a mode and display only characters corresponding to that mode on the display in a larger fashion that they would typically need to be if each character were to be constantly displayed on the screen for selection.

Therefore it would have been obvious to one skilled in the art at the time the invention was made to have included the additional step of varying the sizes of keys likely to be entered next as suggested by Comerford with the enlarging of keys of Venolia to provide a detailed visual depiction of the order of probability of each key likely to be entered next and in addition to the displayed grouping of characters in modes of Shimada to facilitate quicker and more efficient selection.

As to dependent claim 2, Venolia teaches wherein the input of the information unit is fulfilled by a press of a separate key belonging to the user interface (column 6 lines 4-9).

As to dependent claim 3, Venolia teaches where the dynamic I/O arrangement comprises a touch display or a projection keyboard (column 5 lines 26-27, Figure 2 reference character 404, "soft keyboard").

As to independent claim 6, Venolia teaches a memory configured to save information (Fig. 1, reference character 22);

a user interface configured to display a plurality of input elements, each of the input elements corresponding to an information unit (Fig. 3 column 5 line 63-column 6 line 9);

an input control configured to receive selections of information units selected using the input elements displayed by the user interface (column 5 lines 54-56, column 5 line 63 through column 6 line 9);

a control unit coupled to the memory, user interface, and input control, the control unit configured to identify after each input an entered information unit; to determine based on probability which information units will likely be entered next; and to cause the user interface to emphasize by size the input elements corresponding to the information units likely to be entered next, wherein the size of the emphasized input elements are determined on a case-specific basis depending on the probability of the information unit associated with the input element being entered next (Fig. 1, Fig. 4, column 6 lines 44-59, column 7 lines 11-15). As noted by Applicant on page 9 of Applicant's Response dated 09/20/2007, Venolia provides indication of relative probability of an order of information units likely to be entered next. However Venolia uses arrangement of units instead of varying the size of the units to portray the respective probability and does not explicitly teach determining modes.

Comerford, which is in the same field of endeavor of predicting a next likely input, also uses an enhancement method to visually depict next likely units. Comerford provides reasonable suggestion to one skilled in the art that the keys that are most likely to be selected next can vary

in size dependent upon the order of probability (column 3 lines 64-67 “degree of emphasis”, column 13 lines 1-9).

Shimada which facilitates quicker selection of input units teaches automatically determining based on the identity of the information unit without a control input whether input is in a first mode or a second mode (column 2 lines 56-60 – taught as a user selecting an appropriate mode for which the user wants the input units to be displayed, those modes can consist of numbers and the English alphabet),

wherein when it is determined that the input entry is in a first mode, increasing in an equal amount size of members of a group of input elements (column 2 lines 56-64, Figures 4C and 4D). Therefore Shimada provides for a user to select a mode and display only characters corresponding to that mode on the display in a larger fashion that they would typically need to be if each character were to be constantly displayed on the screen for selection.

Therefore it would have been obvious to one skilled in the art at the time the invention was made to have included the additional step of varying the sizes of keys likely to be entered next as suggested by Comerford with the enlarging of keys of Venolia to provide a detailed visual depiction of the order of probability of each key likely to be entered next and in addition to the displayed grouping of characters in modes of Shimada to facilitate quicker and more efficient selection.

As to dependent claim 7, Venolia teaches where the input elements are defined by an area on a touch display or a projection keyboard (column 5 lines 26-27, Fig. 2 reference character 404, “soft keyboard”).

As to dependent claim 10, Venolia teaches wherein the electronic device is a cellular terminal or PDA (column 5 line 39-41).

As to independent claim 11, claim 11 incorporates substantially similar subject matter as claimed in claim 1 and is rejected along the same rationale.

As to dependent claim 12, is rejected under the same rationale as claim 2.

As to dependent claims 15, 16, 18, 19, 21, and 22, note the discussion above, Venolia, Comerford and Shimada all teach a version of making input units that are likely to be picked larger or input elements that correspond to a group larger than normally displayed on a screen. While the references are silent on decreasing elements that do not fall within one of the categories mentioned above, they all provide insight into the main feature, which is to allow for ease and quickness of selection. It would have therefore been obvious to one skilled in the art at the time the invention was made to have incorporated decreasing of the elements not of interest to increase the user awareness by emphasizing wanted elements but not totally eliminating the option for the user to select other input units.

As to dependent claims 17, 20, and 23, Venolia, Comerford and Shimada all teach the use of efficient selecting of input units in some type of wireless device such as a cell phone or pda. While the references are silent to wherein the first mode corresponds to a telephone number

entry mode, mode switching, in cell phones and pda have been around since the late 90's for taken into consideration the need for faster input and selection by a user. It would have been obvious to one skilled in the art to have included a grouping of characters which constitute numbers in the teachings of Shimada as a telephone number entry mode in conjunction with the probability and predicting of Venolia and Comerford for accelerated selection of input units.

Response to Arguments

Applicant's arguments with respect to claims 1, 6, and 11 have been considered but are not persuasive.

Applicant asserts that the art of record neither describes nor suggests automatically determining from the identity of the separate information unit without a control input whether input entry is in a first mode or a second mode.

The Examiner disagrees.

It should be first noted that the Applicant appears to be arguing that the separate input control has to conform to either a number or a character however the claim language does not positively recite this feature. With regard to the limitation "without a control input" note the discussion above with regards to the 112 rejection. However the Examiner is not interpreting the mode button of Shimada as a control input but as the separate information unit that determines the mode. Therefore the cited references teach the limitation of the currently recited claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrea N. Long whose telephone number is 571-270-1055. The examiner can normally be reached on Mon - Thurs 6:00 am to 3:00 pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Doug Hutton can be reached on 571-272-4137. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
